6. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mathew Baca, on, 3/23/06, 3/30/06, 5/09/06.

Claim 1, line 14, replace the word "the" with the word -- a -- .

Claim 5, line 14, replace the word "the" with the word -- a -- .

Claim 9, line 15, replace the word "the" with the word -- a -- .

Claim 1, line 15, replace the phrase "of the port" with the phrase -- of a port --.

Claim 5, line 15, replace the phrase "of the port" with the phrase -- of a port --.

Claim 9, line 16, replace the phrase "of the port" with the phrase -- of a port --.

Claim 9 line 1 delete "computer program product" and replace it with -- computer-readable medium having encoded thereon computer-executable instructions -- .

Claim 9, line 4 , delete "computer program product including" and delete " for"

Claim 12, line 1 delete , "computer program product" and replace it with -- computer readable medium -- .

7. The following is an examiner's statement of reasons for allowance:

While US Patent 6,223,142 teaches (claims 1 and 5) a computer-aided design and verification system a method for facilitating signal override in a simulation model of a digital circuit design that includes one or more design entities described utilizing a hardware description language (HDL), said method comprising: instantiating an instrumentation entity within at least one of said one or more design entities using port mapping fields designated by a non-conventional HDL comment syntax, said non-conventional HDL comment processed by a post-compiler model build process, wherein said non-conventional HDL comment syntax is recognized by an HDL compiler such that the HDL compiler does not instantiate said instrumentation entity into the digital circuit design, said port mapping fields further including: a port name field; Wu et al., ("Digital PWM Control: Application in Voltage Regulation Modules") teaches (claims 1, 5 and 9) a post-compile model build process an input port map field containing data representing an input port at which said instrumentation entity receives a designated signal to be overridden and an output port mapping field comprising an override signal field specifying the name of said override signal, specifying the name of the port from

which said override signal is output from said instrumentation entity, and a target signal field specifying the name of said designated signal to be overridden; Improv Systems Inc., teaches (claims 1, 5 and 9) said non-conventional load tool instantiate said instrumentation entity during a post-compile; none of these references, taken either alone or in combination, with the prior art of record disclose

*(claims 1, 5 and,9 ) "generating signal selection means within said simulation model for selectively overriding said designated signal with said override signal responsive to said post-compiler instrumentation load tool processing said port mapping fields; and wherein said output port mapping field further comprises a control port field specifying an output port for delivering an override enable signal to said signal selection means,"*

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the applicants' invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
